## LOGO INTRO

### Scene 1: Introduction

(A person is typing on a laptop. WordPress logo and 'Install Plugin' button png will appear on the screen from the first)

Do you want to install a plugin in WordPress? I will help you out.  
Hi, I am Ashikur Rahman Ashik from weDevs.com. In this video I will be showing you **how to install a plugin in WordPress** (Text will appear on Screen). Let's get started.

### Scene 2: Dashboard

(Screen Record)

So this is your front-end dashboard or admin panel. This is where you can control and customize everything on your site. You can add a new post (Text Field) or edit an existing one (Text Field). This admin panel also allows us to install a new plugin. (Text Field)

**So what is a wordpress plugin?** (A person is writing the word plugin on the screen)

**WordPress plugins are apps that allow you to add new features and functionality to your WordPress website**(A person is checking out a marketplace on his smartphone/tablet).

### Scene 3: Plugin Section

(Screen Record)

To install a plugin you have to find the Plugin section which is on the left side of your dashboard. After placing the cursor on the plugins section, you will notice three options have appeared. (Zoom in)

The first option is 'installed apps'. This option is used to view the apps that are already installed in your wordpress site. The second option is called 'Add New. From where you can install and activate a new plugin. And the third option is used to make direct edits to your plugins.

Click on 'Add New' to start the installation process. It will take you to this page where you can find the plugin that you want to install. There are more than 48000 free wordpress plugins available right now. Type the name of the plugin you want to install (**Zoom in**) and press enter to see the search result. I have searched for WooCommerce and as you can see it is the first result.

To trigger the installation all you have to do is click on install now. After the successful completion of the installation process, you will see the 'install now' button has turned into 'Activate'. That means it is not active yet. To run the plugin you have to activate it. Simply click on Activate to activate the plugin.

### **Scene 4: Congratulations!**

(A Person is writing the word congratulations on screen)

And that is it. Congratulations! You have successfully installed a WordPress Plugin.

### **Scene 5: Manual Plugin and Deactivation**

(Screen Record)

But what if you want to install a plugin manually. No worries! It is much easier. All you have to do is upload the zip file of the plugin to install it. Go to the plugin screen by clicking on Add new. You will see a button on the top naming Upload Plugin. Click on the button and a dialogue box will pop up. Click on choose file (**Zoom in**) to browse the zip file of your plugin. Then click install now to install it. After that you can activate the plugin.

If you want to get rid of any plugin just go to the deactivate bar and select the specific plugin to deactivate.

### **Scene 6: Ending Screen**

(Subscription Template)

Thank you for watching. Stay tuned to get more videos like this. Till then stay safe and sound.
